

# What is the BSI Kitemark for Building Information Modelling (BIM)?

The BSI Kitemark for BIM (Building Information Modelling) is now available.

Achieving the BSI Kitemark for BIM will help organizations in the construction industry demonstrate they are able to deliver BIM projects at the Design & Construction phase (PAS 1192-2). This builds on the BSI verification scheme which gives organizations the evidence they need to prove their BIM capability. In a competitive marketplace, with governments around the world starting to make BIM a condition of contract, the BSI Kitemark for BIM gives organizations delivering BIM projects the opportunity to differentiate themselves and prove their credentials in relation to PAS 1192-2. Developed with both Tier 1 and non-Tier 1 organizations in mind, the BSI Kitemark for BIM will provide the most robust measurement of a company's delivery of BIM projects, certifying their diligence in design and construction, supply chain management, and delivery of customer service excellence. To achieve and maintain the BSI Kitemark, organizations will be routinely assessed by BSI, providing their clients with complete confidence in their delivery to industry standards.
